ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND ORDERS IN ALL MANUFACTURING INDUSTRIES

The preliminary estimate of manufacturers' shipments in January 1965 totalled \$2,491 million, lower than the revised December value of \$2,642 million by 5.7 per cent, but higher than the value of \$2,427 million in January 1964 by 2.6 per cent. However, after adjustment for seasonal variation, shipments in January were 1.6 per cent higher than in December 1964. Without seasonal adjustment, both the durable and the non-durable industry groups showed declines in shipments of 7.0 per cent and 4.6 per cent respectively in January as compared with December.

Considering shipments by the major industry groups all except five showed decreases in January over December. The groups which recorded increased shipments were the clothing industries of 16.9 per cent, the leather industries of 3.8 per cent, the wood industries of 2.9 per cent, the transportation equipment industries of 1.6 per cent, and the knitting mills of 1.3 per cent; only three of these, however, showed increases over January 1964, as shipments in the transportation equipment industries were 7.2 per cent lower and in the leather industries 2.6 per cent lower than in January 1964. Relatively large decreases of shipments in January as compared with the previous month were reported by the machinery industries which decreased by 21.1 per cent, and the non-metallic products industries which dropped by 20.2 per cent. The tobacco industries whose shipments in January were lower than in December by 2.7 per cent had in fact advanced by 37.7 per cent over the corresponding month in 1964. Of the remaining groups six showed declines in January of 6 per cent or more: the metal fabricating industries, the electrical products industries, the food and beverage industries, the rubber industries, the primary metal industries, and the petroleum and coal products industries.

Inventory owned by manufacturers at the end of January was valued at a preliminary estimate of \$5,170 million which indicated only a slight increase of 0.3 per cent over \$5,153 million in December, but also represented an increase of 4.1 per cent as compared with its corresponding month in 1964. Inventory owned in the non-durable goods industries in January was maintained at about the same level as in December 1964 but was higher than in the same month a year ago by 1.4 per cent. Inventory owned in the durable goods industries on the other hand rose slightly at 0.7 per cent over December, and was 7.4 per cent higher as compared with January 1964. Seasonally adjusted estimates showed that all inventory components had increases in January with 1.4 per cent for goods in process, 0.6 per cent for finished products, and 0.2 per cent for raw materials.

Unfilled orders at the end of January 1965 were estimated to have increased by 3.4 per cent over December and 10.3 per cent over January 1964; but adjusted for seasonal variation they dropped by 2.8 per cent from December 1964. A brief review of unfilled orders for 1964 shows that they increased substantially throughout the year from the high level of the last quarter of 1963, with an average monthly increase of 12.8 per cent over 1963. Seasonally adjusted estimates indicated a higher rate of increase during the last quarter of the year. Generally speaking, unfilled orders in the durable goods industry group were about four times that of the non-durables. In 1964, unfilled orders in the durable goods industries conformed very much with the upward pattern of the whole manufacturing industries; while the non-durable group showed a high increase in January and then declined considerably during the last five months.

Among the major industry groups, primary metal industries registered the highest increase. As a group, it rose sharply to 32.7 per cent higher in January 1964 than in December 1963; and though dropping to a lower level during the second and the third quarters, its monthly average was 22.8 per cent over the preceding year. Metal

fabricating industries also increased remarkably during the year to a high of 47.6 per cent in December 1964 over the corresponding month in 1963, and at a monthly average of 23.0 per cent over the previous year. The electrical products industry group rose considerably except in the last quarter, and was estimated at a monthly average increase of 12.8 per cent; the transportation equipment industry group with a monthly average increase of 11.6 per cent over 1963 also advanced steadily during the year. All other major industry groups showed a certain amount of increases in unfilled orders in 1964, except for the miscellaneous manufacturing industries whose monthly average decreased by 5.4 per cent from the previous year.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Manufactures totals due to inventory adjustments for certain industries where Census of Manufactures data represent production rather than shipments values.

TABLE 3. - (1) See footnote (1), table 2.

- (2) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.
- (3) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (3), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND ORDERS IN ALL MANUFACTURING INDUSTRIES

The preliminary shipments estimate of \$2,461.8 million in February 1965 showed a small increase of 1.1 per cent over the revised January estimate of \$2,436.0 million and 1.9 per cent over the \$2,414.8 million estimate for February a year ago. After seasonal adjustment, shipments in February were valued at \$2,728.0 million which was only 0.8 per cent above the January level. February shipments in the durable goods industries showed a moderate increase of 1.2 per cent from \$1,101.3 million to \$1,114.7 million slightly higher than the non-durable goods which rose 0.9 per cent from \$1,334.7 million in January to \$1,347.1 million in February.

All the durable goods industry groups, except the transportation equipment industries which dropped 2 per cent, advanced somewhat with increases more pronounced in the furniture and fixture industries and the wood industries which rose 10.8 per cent and 8.1 per cent respectively. Within the non-durable goods industries, appreciable increases in shipments were also reported in the rubber industries of 18.7 per cent, the clothing industries of 18.4 per cent, the leather industries of 12.0 per cent, and the knitting mills of 5.9 per cent; the tobacco industries registered the greatest decline of 21.4 per cent and the petroleum and coal products industries decreased by 5.2 per cent in February.

New orders received by manufacturers during February decreased 2.8 per cent from \$2,583.9 million in January, but seasonally adjusted, the series shows an increase of 4.1 per cent to a February level of \$2,787.6 million. At the end of February, the backlog of unfilled orders which rose 1.8 per cent in January was at \$2,890.3 million; after adjustment for seasonal variation, the February value was estimated at \$2,830.3 million which was 2.2 per cent higher than at the end of January. Unfilled orders held by durable goods producers amounted to \$2,393.2 million in February, 2.6 per cent above the month before; the non-durable producers' unfilled orders were down 2.2 per cent from the \$508.3 million estimated in January.

Inventories owned by manufacturers were up 1.5 per cent over the level of \$5,189.3 million at the end of January to a February high of \$5,265.4 million; seasonally adjusted the rise was 0.8 per cent to a February level of \$5,198.6 million. The increase in inventories in the unadjusted series showed up in the goods in process and the finished products both of which rose by just over 2 per cent. However, the seasonally adjusted estimate indicated that the increase in raw materials was seasonally more important as the adjusted series shows an increase in this component of 0.8 per cent relatively higher than the increase in the two other components. Inventories owned by durable goods manufacturers at the end of February increased by 1.8 per cent from \$2,471.2 million in January, slightly more than the non-durable goods industries which rose 1.2 per cent from the level of \$2,718.1 million at the end of January. The tobacco industries which had a significant decrease of shipments in February reported a 8.5 per cent build up in total inventories, the highest relative increase among the manufacturing industries.

Both the ratio of inventories owned-to-shipments and the ratio of finished products-to-shipments at 2.14 and 0.75 in February 1965, reached record highs for the past two years.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Manufactures totals due to inventory adjustments for certain industries where Census of Manufactures data represent production rather than shipments values.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(3) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (3), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND ORDERS IN ALL MANUFACTURING INDUSTRIES

Manufacturers' preliminary shipments estimate in March 1965 reached a new record high of \$2,809.0 million, an increase of 14.8 per cent over the revised value of \$2,446.4 million in February; but, after seasonal adjustment, shipments were estimated at \$2,734.5 million, showing only a small increase of 0.9 per cent over the February value of \$2,710.9 million. Total shipments during the first quarter amounted to \$7,691.3 million, 3.0 per cent higher than the 1964 level of \$7,466.6 million.

In March, virtually all major industry groups experienced considerable increases in shipments, with the greater gain of 19.2 per cent achieved by the durable industry groups. This substantial increase of shipments in the durable goods industries was led by the transportation equipment industries of 32.4 per cent, the non-metallic industries of 21.6 per cent, and the metal fabricating industries of 21.0 per cent. The other five durable goods industry groups had increases ranging from 10.0 per cent to 18.1 per cent. Within the non-durable goods industries which advanced by 11.2 per cent in March, relatively larger increases were recorded in the chemical and chemical products industries of 20.3 per cent, the tobacco industries of 17.8 per cent, the paper and allied industries of 15.7 per cent, and the miscellaneous manufacturing industries of 15.8 per cent. The petroleum and coal products industries and the knitting mills had relatively smaller increases of 3.3 per cent and 1.7 per cent respectively. All major industry groups also showed a certain amount of quarterly increases in shipments over their 1964 level, except the leather industries, the machinery industries and the metal fabricating industries; the tobacco industries registered the highest increase of 28.8 per cent as compared with the first quarter of 1964.

New orders received by manufacturers during March had increased 16.1 per cent from the revised estimate of \$2,518.9 million in February, but were up by only 1.0 per cent from the \$2,792.2 million estimated after seasonal adjustment.

Unfilled orders at the end of March increased by \$115.9 million to \$3,028.4 million which was 18.7 per cent higher than a year ago; \$112.6 million of this increase in March was attributable to the durable goods industry groups.

Inventories owned by manufacturers at the end of March totalling \$5,335.2 million were up by 0.8 per cent from \$5,294.4 million in February and were 7.5 per cent higher than the corresponding month in 1964. This moderate March accumulation occurred almost entirely in the durable goods industries which rose 1.5 per cent while the non-durable industries increased only 0.1 per cent. Both the seasonally adjusted and unadjusted estimates showed increases in total inventories held of 0.9 per cent in March from the level of \$5,524.9 million and \$5,590.2 million in February. This rise of inventories after seasonal adjustment, was reflected more in raw materials and goods in process and less in finished products with increases of 1.4 per cent, 1.0 per cent and 0.2 per cent respectively. Among the major industry groups, the tobacco industries reported the highest increase in stocks at 9.8 per cent; declines in six industry groups were slightly more than offset by the increases of others.

The ratio of finished product inventories-to-shipments of manufacturing industries declined from 0.77 to 0.67 while the ratio of inventories owned-to-shipments declined from 2.16 in February to 1.90 in March.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

ABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

ABLE 2. - (1) Annual shipments values differ slightly from published Census of Manufactures totals due to inventory adjustments for certain industries where Census of Manufactures data represent production rather than shipments values.

ABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(3) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

ABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (3), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND ORDERS
IN ALL MANUFACTURING INDUSTRIES

The preliminary estimate of shipments in manufacturing industries totalling \$,778.1 million in April was 2.9 per cent down from the revised March value of \$,860.1 million, but was 5.9 per cent up from the April 1964 total of \$2,623.3 million. After adjustment for seasonal variation, the value of shipments at \$,771.0 million was only 0.5 per cent lower than the previous month. April shipments brought the total in the first four months of the year to \$10,520.6 million, higher by 4.3 per cent than in the corresponding period a year earlier of \$10,089.9 million. April shipments in the durable goods industries declined 3.4 per cent from the level of \$1,354.8 million in March, and the non-durable goods industries dropped 6.2.3 per cent to \$1,470.0 million in April.

Nearly all of the major industry groups were off from the high records of shipments obtained in March, with the greatest decline of 18.7 per cent reported by the tobacco industries, and of 12 per cent shown by the leather industries, the knitting mills, the clothing industries, and the wood industries. The small to considerable decreases occurring in most of the major industry groups were slightly offset by the small increases obtained by the machinery industries of 5 per cent, the rubber industries and the primary metal industries of 2 per cent, and the foods and beverages and the paper and allied industries of 0.5 per cent. In comparison with the corresponding month in 1964, however, all industries had somewhat higher shipments in April except the tobacco industries and the leather industries.

New orders received during the month of April reached \$2,795.9 million, 5.9 per cent lower than the all-time peak of \$2,970.2 million recorded in March, but 56 per cent higher than in the same month in 1964.

The backlog of unfilled orders at the end of April rose 0.6 per cent to \$,040.4 million from \$3,022.6 million in March; seasonally adjusted, unfilled orders were up by 1.9 per cent in April. As compared with the April value a year earlier, this increment in April 1965 brings the level up to 18.1 per cent or to 18.5 per cent, seasonally adjusted.

At the end of April, manufacturers' inventories owned totalled \$5,328.9 million, a very slight increase of 0.04 per cent from the month earlier, but 7.1 per cent higher than April a year ago. After allowance for seasonal variation, inventories owned and total inventories held showed increases of 0.4 per cent and 0.2 per cent respectively over the previous month; the small April accumulation of inventories occurred entirely in goods in process and raw materials, the increase in these components was, in fact, partially offset by the decrease in finished products inventories. Without seasonal adjustment, inventories owned by durable goods manufacturers rose 0.4 per cent to \$2,573.9 million in April, while non-durable goods inventories owned recorded a decline of 0.3 per cent from March. The highest decreases of 1.9 to 3.4 per cent in inventories owned were reported by the paper and allied industries, the tobacco industries, the transportation equipment industries, and the clothing industries; the highest increases ranging from 1.8 to 2.5 per cent were shown by the non-metallic mineral products industries, the machinery industries, and the petroleum and coal products industries.

In April, the ratio of the value of total inventories owned to the value of total shipments increased to 1.92 from 1.86 in March, although it was lower than the ratios of the first two months in 1965; the ratio of finished products inventories to shipments was 0.68 in April as compared with 0.66 in March.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

- TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.
- TABLE 2. - (1) Annual shipments values differ slightly from published Census of Manufactures totals due to inventory adjustments for certain industries where Census of Manufactures data represent production rather than shipments values.
- TABLE 3. - (1) See footnote (1), table 2.
- (2) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.
- (3) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.
- TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (3), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND ORDERS IN ALL MANUFACTURING INDUSTRIES

Shipments of manufacturing industries in May advanced 2.1 per cent to \$2,808.4 million from \$2,751.6 million in April; after seasonal adjustment, shipments dropped slightly for the second time in 1965 by 1.1 per cent. However, at the rate of 9.3 per cent in May, seasonally adjusted shipments had increased for the fifth consecutive month as compared with the corresponding months in 1964. Cumulative shipments in the January - May period in 1965 were estimated at \$13,302.6 million, higher by 4.9 per cent than the value of shipments in the same period a year earlier of \$12,685.6 million.

The preliminary estimate of \$1,325.7 million of shipments in the durable goods industry group in May showed a rise of 2.5 per cent over the previous month's estimated value of shipments of \$1,293.5 million and 12.7 per cent above those in May 1964; the highest rate of increase was 16.4 per cent which was shown by the non-metallic mineral products industries; 0.2 to 7.3 per cent increases were recorded by the remaining industries of the group. Within the non-durable industry group which showed an increase in shipments of only 1.7 per cent in May as compared with April increases ranging from 0.4 per cent to 8.4 per cent were offset by decreases in shipments in the clothing industries (-15.9), the leather industries (-11.8), and the tobacco industries (-1.3).

New orders of manufacturers during May showed only a fractional increase of 0.2 per cent at \$2,791.5 million as compared with \$2,786.6 million in April; this is 6.7 per cent higher than new orders of \$2,615.0 million for the same month in 1964. Seasonally adjusted, new orders in May had in fact dropped by 3.7 per cent. New orders of durable goods industries in May were down by 2.2 per cent, whereas the non-durable goods producers reported an increase of 2.3 per cent.

At the end of May, unfilled orders were estimated at \$3,040.6 million, slightly lower than the previous month, by 0.6 per cent, while the seasonally adjusted estimate showed practically no change. In value terms, the 1.9 per cent increase of unfilled orders in the non-durable goods industries was more than offset by the 1.0 per cent decrease in the durable goods industries. Compared with the level of 1964, manufacturers' unfilled orders at the end of May were 18.1 per cent higher, seasonally adjusted.

Inventories owned by manufacturers at the end of May amounted to \$5,341.1 million, only slightly higher, by 0.2 per cent than last month, but 7.2 per cent higher than the \$4,984.6 million of May 1964. Manufacturers' total inventories held in May were up by 0.3 per cent to \$5,636.9 million, and were also up by 0.7 per cent in the seasonally adjusted estimate of \$5,617.4 million. The small increase of inventories in May occurred mostly in goods in process and raw materials. Inventories owned by non-durable goods producers declined 0.8 per cent from \$2,755.4 million to \$2,734.1 million in May, while the durable goods producers showed a rise of 1.2 per cent to \$2,607.0 million from \$2,576.0 million a month ago. The highest increase of 3.3 per cent in inventories owned was reported by the primary metal industries, and the biggest decrease of 3.7 per cent by the chemical and chemical products industries. Small to moderate increases in some major industry groups were substantially offset by decreases in other major industry groups.

Both the ratio of total inventories owned to shipments, and the ratio of finished products inventories to shipments in May showed small decreases from 1.94 and 0.69 last month to 1.90 and 0.67 respectively this month.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventory held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Manufactures totals due to inventory adjustments for certain industries where Census of Manufactures data represent production rather than shipments values.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(3) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (3), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND ORDERS IN ALL MANUFACTURING INDUSTRIES

Shipments of manufacturers in June advanced to a preliminary estimate of \$2,944.9 million, an increase of 4.1 per cent from the revised estimate of \$2,829.8 million in May. After seasonal adjustment the increase of shipments in June was 0.5 per cent higher than that of last month, and was 8.7 per cent over the corresponding month in 1964. Cumulative shipments in the first half of 1965 amounting to \$16,268.9 million, were 5.6 per cent higher than the value of \$15,406.2 million in the same period a year ago.

June shipments of non-durable industries rose 2.3 per cent to \$1,522.2 million from the revised value of \$1,487.5 million in the previous month; relatively higher increases of 12.4 and 10.7 per cent were reported by the tobacco industries and the fitting mills, and a decrease of 9.0 per cent was shown by the clothing industries. Durable goods producers' shipments reached \$1,422.8 million in June which was 6.0 per cent higher than \$1,342.3 million in May; more substantial advances of 16.8, 14.7 and 11.2 per cent were achieved by the wood industries, the metal fabricating industries, and the non-metallic mineral products industries respectively. As compared with the value of shipments in June 1964, durable and non-durable goods industries were up 13.5 per cent and 3.8 per cent this month; nearly all the major industry groups showed increases, ranging from 0.8 to 17.5 per cent, except the leather industries, the petroleum industries and the textile industries.

New orders received by manufacturers during June were valued at a preliminary estimate of \$2,973.6 million which was 5.9 per cent above the value of the month before, and 8.7 per cent over the value in June the year earlier; seasonally adjusted, manufacturers' new orders showed an increase of only 2.5 per cent for the month. Durable goods producers' new orders in June were up by 8.7 per cent to \$1,405.0 million from the last month's level of \$1,292.9 million, and 10.9 per cent higher than the comparable level of the year before.

The backlog of unfilled orders at the end of June totalled \$3,063.7 million, a small increase of 0.9 per cent over \$3,035.0 million in May, and 17.5 per cent higher than the value in June 1964. Average month-end unfilled orders of manufacturers in the January - June period was 16.7 per cent above the level of the same period of last year. At the end of June, unfilled orders of durable goods producers declined 0.7 per cent from May due to the higher than incoming business increase in shipments, whereas producers of non-durable goods reported an increase of 8.9 per cent over the level in May. Seasonally adjusted estimate of manufacturers' unfilled orders in June was 1.7 per cent higher compared with that of last month.

Total inventories held by manufacturing industries at the end of June was slightly lower by 0.4 per cent to \$5,608.5 million from the \$5,629.4 million estimate in May, with the more prominent decrease shown in the non-durable industries. Manufacturers' owned inventories in June also showed a fractional decline to \$5,327.4 million from \$5,339.0 million at the end of the previous month; the small decrease in non-durable goods industries was partially offset by a slight increase in durable goods industries. In comparison with the level at the end of June of last year, both

inventories owned and inventories held had increases of 7.1 and 6.5 per cent respectively this month. After allowance for seasonal variation, inventories held at the end of June were up by 0.4 per cent compared with the level in the previous month with increases of 0.3 to 0.8 per cent shared by raw materials, finished products, and goods in process. Without seasonal adjustment, a more significant decrease of 2.9 per cent in inventories owned was experienced by the petroleum and coal product industries, and the highest increase of 2.6 per cent was reported by the clothing industries.

In June, the ratio of inventories owned to shipments dropped to 1.81 from 1.88 of last month while the ratio of finished products inventories to shipments declined from 0.66 to 0.63 in this month.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Manufactures totals due to inventory adjustments for certain industries where Census of Manufactures data represent production rather than shipments values.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(3) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (3), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Revisions to the previously published series of shipments, inventories and orders have been made from 1961 to the current month of this year and are contained in this report. But despite changes in the values, the year to year movements of all series generally remain about the same.

The annual revision to the monthly series has been included in the regular January issue for the past several years, but since the 1962 census values have become available it seems reasonable and correct to improve the series now even if faster processing of the 1963 census should bring another revision based on 1963 census values fairly soon.

A number of factors contributed to the changes in the revised values. Shipments and inventories in 1961 are now based on final 1961 census values. Actual values of the 1962 census of manufactures reports were used for 1962, replacing estimates based on 1961 values, and these 1962 census values are now used as the base values for the following years. The 1963 values, however, also incorporate preliminary 1963 census of manufactures values where necessary when these values were available. The values for all months in 1963 have also been corrected for errors both in estimates and in processing.

All these improvements are reflected in the new 1964 and 1965 monthly series which have been further refined by additions to and deletions from the group of reporting firms and by inclusion of data from individual reports received too late for use in earlier issues.

The transfer of railway repair and maintenance shops from manufacturing activity to the transportation sector of the economy accounts for the major part of the revision in 1961. It meant a change in 1961 shipments of \$117 million which shows up in the railway rolling stock industry, in major group number 15 and in total shipments by provinces, where Quebec's figures reflected a \$45 million decline and Manitoba and Ontario, declines of \$27 million and \$26 million respectively. Since the railway rolling stock industry included repair and maintenance activity in the series published up to June 1965, the years 1962 to 1964 and the months from January to July 1965, will show a comparable decline for this adjustment.

The major changes in the 1964 estimates of shipments show up in three major groups: number 6, knitting mills; number 8, wood industries; and number 14, machinery industries. The substantial revision of shipments in the knitting mills industry group in 1964 is mainly because of a correction of low preliminary estimates for some firms that reported late in the hosiery industry and the correction up to 1963 to census values for the estimates of other knitting mills. In the wood industries, the downward revision in the shipments estimate is chiefly the result of the change in the value of saw mills shipments in the base year. The trend of monthly shipments in this industry is being revised from a primarily physical value series adjusted for price changes to a survey covering sales from a representative group of mills; the trend shown here may be subject to further revision. The revision to estimated shipments in the machinery industries is almost entirely the result of revision to the base values in 1962.

The largest changes in the revisions of unfilled orders in 1964 appear in the leather industries and the textile industries where the higher 1962 base and the corrections for late returns are the main causes. Since the estimate of new orders is derived from the estimate of shipments and unfilled orders, this series reflects revisions to both.

The overall revision has had a generally smaller effect on inventory level figures than on other series in the report. The transfer of railway repair shops from manufacturing to transportation mentioned above was principally responsible for the downward change in the revised estimates of inventories held in the transportation equipment industries.

TREND SUMMARY

The preliminary estimate of manufacturers' shipments in July, based on the 1962 census values, totalled \$2,793.1 million, a drop of 7.5 per cent from the revised June estimate of \$3,018.9 million but 10.6 per cent higher than the revised estimate of shipments in July 1964. After allowance for seasonal variation, the July shipments were brought up to \$2,898.7 million which was 2.6 per cent higher than the seasonally adjusted estimate of June shipments and 12.3 per cent over the level of July last year.

Cumulative shipments for the seven months period of 1965 reached \$19,330.2 million showing an increase of 6.8 per cent over the same period in 1964. During this period shipments in the durable goods industry groups showed greater strength in general than shipments in the non-durable industry groups. Total shipments in the durable goods industry groups were up by 9.7 per cent over the comparable period in 1964 while the non-durable goods industries rose by 4.3 per cent.

In July shipments in each of the durable goods industry groups declined substantially as compared with shipments in the previous month but were also considerably higher than shipments in July 1964. The more pronounced changes occurred in the transportation equipment industries and the furniture and fixtures industries. Within the non-durable goods category, relatively larger decreases in July were reported by the tobacco industries, the rubber industries, the textiles industries and the chemical and chemical products industries. Increases of shipments in July over last month were reported in only three industry groups—the clothing industries, the knitting mills, and the petroleum and coal products industries.

New orders received by manufacturers during July were valued in the preliminary estimate at \$2,790.8 million, lower than the revised estimate of new orders in July by 7.8 per cent but higher than the July 1964 estimate by 8.5 per cent. Seasonally adjusted, the estimate of new orders for this month was brought up to \$2,891.2 million, an advance of 2.2 per cent over the \$2,829.3 million in June. Durable goods producers' new orders in July were down 8.4 per cent from June but were up 15.1 per cent from the level of last year.

At the end of July, unfilled orders dropped slightly to \$2,986.5 million from \$2,988.8 million in June, and to \$2,944.4 million from \$2,951.9 million after seasonal adjustment. In comparison with the same month in 1964, manufacturers' unfilled orders in July this year were 14.5 per cent higher. Unfilled orders in the durable goods industries showed an increase of 0.3 per cent in July while the non-durable goods industries reported a drop of 1.9 per cent; both the durable and the non-durable industry groups have about the same relative increase of just over 1 per cent in July as compared with the level at the same time a year ago.

Total manufacturers' inventories owned at the end of July amounted to \$5,311.6

million according to the preliminary estimate, which is slightly less than the level at the end of June of \$5,361.1 million. The seasonally adjusted values, however, show a slight increase in total inventory owned at the end of July at \$5,413.3 million which is 0.5 per cent above the level at the end of June. These estimates of inventories owned in July, both seasonally adjusted and unadjusted, were up 7.3 per cent from the corresponding estimates a year earlier. At an estimate of \$5,657.8 million total inventories held were also slightly lower at the end of July as compared with \$5,673.4 million at the end of June. Seasonally adjusted, however, total inventories held rose by 0.5 per cent to \$5,716.1 million; the larger part of the increase was in finished products which rose by 1.8 per cent to \$1,956.7 million, while goods in process rose fractionally and raw materials declined. In the major industry groups, more pronounced decreases of inventories owned in July were reported by the tobacco industries, 5.6 per cent, and the transportation equipment industries, 5.4 per cent, although the latter in fact showed a rise in inventory owned of 21.1 per cent over the end of July last year. Relatively marked increases in July inventories owned were shown by the primary metal industries of 2.5 per cent and the paper and allied products industries of 1.8 per cent, and both of which were also higher by 7.8 per cent and 7.2 per cent respectively over the level of inventories at the end of 1964.

The ratio of total inventories owned to shipments as well as the ratio of finished products inventories to shipments, rose in July by the customary large amount, to 1.92 and 0.70 respectively from 1.78 and 0.64 in June.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventory held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groupings will be found on page 92 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Total shipments of all manufacturing industries in August were off 2.2 per cent to \$2,689.8 million from \$2,750.0 million of July; the seasonally adjusted estimate of \$2,769.2 million for August is 3.0 per cent lower than the July value. Comparing with August of last year, however, manufacturers' shipments this month were higher by 7.6 per cent, or by 5.4 per cent after seasonal adjustment. Durable goods manufacturers' shipments in August, as in many previous months of the year, changed much more than the non-durables; the former dropped 10.3 per cent and the latter rose 4.8 per cent. Manufacturers' shipments in the year to date reached \$21,976.8 million, 1.7 per cent above the same period of 1964.

The major contributors to the gain in shipments in the non-durable industry groups were the clothing industries, the paper and allied products industries and the leather industries; the highest relative increases were reported in, again, the leather industries, 55.3 per cent, and the clothing industries, 44.5 per cent, which were at their seasonal high. The only substantial decline in shipments occurring in the non-durable goods category in August was recorded in the foods and beverages industries which declined 3.1 per cent. Shipments in the transportation equipment industries which fell 46.0 per cent reflecting the seasonal low in automobile shipments in August accounted for more than the decline in the whole durable goods manufacturing group. Within the durable goods group, industries which showed considerable advances were the furniture and fixture industries, 16.8 per cent, and the metal fabricating industries, 6.0 per cent.

In August, new orders received by manufacturers valued at a preliminary estimate of \$2,759.5 million and at a seasonally adjusted estimate of \$2,864.9 million were both fractionally above the estimates of last month. Non-durable goods producers reported an increase of 4.7 per cent in new orders during August, while the durable goods producers recorded a fall of 4.7 per cent.

Unfilled orders at the end of August reached a new high at the level of \$3,099.1 million and \$3,043.0 million seasonally adjusted, and were 2.3 per cent and 3.3 per cent respectively over the revised estimates of the previous month. In comparison with the comparable level of 1964, the average monthly level of unfilled orders in the year to date was 17.1 per cent higher. The small decrease of 1.7 per cent in unfilled orders in the non-durable industries was more than offset by the considerable increase of 3.2 per cent reported by the durable industries, both of which were higher than the levels of last year by 19.3 per cent and 18.0 per cent respectively.

At the end of August, both manufacturers' inventories owned and inventories held showed just 1.0 per cent ahead of last month, rising from \$5,341.4 million to \$5,397.2 million and from \$5,641.2 million to \$5,699.2 million. After adjustment for seasonal variation, inventories owned in August rose by only 0.5 per cent and inventories held by 0.6 per cent; more than one-half of the small accumulation in inventories came from raw materials, while goods in process and finished products showed small changes from the month before. Inventories owned by durable goods

manufacturers at the end of August were 1.3 per cent higher than last month, and non-durable goods producers reported a rise of 0.8 per cent. Comparatively marked increases in inventories owned were shown by the transportation equipment industries, 7.9 per cent, and the petroleum and coal products industries, 3.4 per cent, and decreases were reported by the tobacco industries of 3.6 per cent, and the leather industries and the clothing industries of 2.8 per cent each. Nearly all major industry groups contributed to the 6.8 per cent advances in manufacturers' inventories owned at the end of August comparing with the same month of last year, except the foods and beverages industries and the petroleum and coal products industries which showed decreases.

In August the ratio of manufacturers' inventories owned to shipments rose again from 1.94 in July to 2.01 and the ratio of finished products inventories to shipments increased from 0.70 to 0.72 largely reflecting the more than seasonal low in shipments in the month.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Manufacturers' shipments and new orders rose in September from the revised August estimates of \$2,725.5 million and \$2,802.8 million by 6.4 per cent and 3.4 per cent to \$2,899.7 million and \$2,898.8 million respectively. Unfilled orders were fractionally lower in September than last month according to the preliminary estimates. After allowances are made for seasonal variation, however, the value of September shipments showed a decline of 1.7 per cent from the previous month and new orders dropped 3.0 per cent. Seasonally adjusted unfilled orders of \$3,113.6 million at the end of September showed a 2.1 per cent increase from the previous month. Manufacturers' inventories owned and inventories held at the end of September were up by 0.9 per cent and 0.7 per cent respectively, and by 1.0 per cent and 0.6 per cent after seasonal adjustment. As in August, the build-up in September inventories was mostly in goods in process and raw materials. Finished products inventories rose very slightly. The ratio of the estimates of inventories owned-to-shipments, not adjusted for seasonal variation showed a decline in September. Inventories were 1.89 times shipments, as compared with 1.99 in August. The ratio of finished products-to-shipments at 0.67 at the end of September was the lowest since June.

In comparison with the corresponding month a year earlier, shipments in September were 3.9 percent higher, the smallest relative increase since March 1965. During the first nine months of the year total shipments amounted to \$24,912.3 million, 6.5 per cent above the comparable value of \$23,395.0 million in 1964. Durable goods producers' shipments advanced 11.5 per cent to \$1,296.6 million in September after two months of declines from the record high in June. Shipments of non-durable goods manufacturers increased 2.6 per cent from August to a new high of 1,603.1 million.

With the exception of three non-durable goods industry groups - the foods and beverages industries, the paper and allied products industries, and the clothing industries all of which showed fractional decreases, all major industry groups registered increased shipments in September, mostly seasonal. More than two-fifths of the gain in September came from the 45.6 per cent seasonal increase in the transportation equipment industries which, however, for the first time since February fell below the corresponding monthly level of shipments in 1964. The next largest increase in absolute terms in September shipments as compared with August was in the electrical products industries which rose 18.0 per cent from the revised estimate of last month and 2.2 per cent compared with that of September 1964 to a record high of \$73.3 million. It must be noted however that the preliminary estimates for this major group have frequently not been reliable during the past year as many respondents to the survey have been filing the monthly returns late. A comparison of the August revised estimate with the preliminary estimate for this month shows a revision of nearly 10 per cent in the shipments value. The estimated value of \$43.1 million in September shipments in the rubber industries was 26.3 per cent higher than during the preceding month but slightly lower than the comparable level of last year. The major factor in this rise appears to be a normal autumn increase in manufacturing activity.

Manufacturers' inventories owned in September were valued at \$5,477.5 million compared with the revised \$5,430.1 million in August. The average month-end level of inventories owned during the January - September period was 7.0 per cent above the comparable level in 1964. The advance of inventories in September as usual was largely concentrated in the durable goods industries. The greatest contributor to the gain of September inventories was the transportation equipment industries reflecting a seasonal high level of goods in process inventory in the motor vehicles

industry. The foods and beverages industry group showed the largest August to September decline in shipments and reported a substantial increase in inventories, almost entirely in the form of finished products. The largest relative decline in inventories owned in September was recorded in the tobacco industries which dropped 3.3 per cent from the level in August. Nearly all major industry groups indicated higher inventories in September this year than in September 1964, except for the foods and beverages industries and the petroleum and coal products industries; the largest increases were in the metal fabricating industries, the machinery industries, the electrical products industries, and the primary metal industries.

The increase of new orders received in September was almost equally shared by the durables and the non-durables groups. New orders, seasonally adjusted, were 4.7 per cent higher than in the same month a year ago.

Unfilled orders of durable goods producers at the end of September showed a fractional increase of 0.1 per cent from last month. Unfilled orders in the January - September period ranged from 12.7 per cent to 20.0 per cent ahead of the comparable months in 1964, with the greatest increases shown by the metal fabricating industries and the machinery industries.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Following seasonal trends, preliminary October estimates of manufacturers' shipments, new orders and unfilled orders were slightly lower than the revised September values and inventories were somewhat higher. However, after adjustment for seasonal variation, all series reflected small to moderate gains.

Unadjusted October shipments at \$2,957 million were 0.4 per cent lower than the September figure of \$2,968 million but 7.4 per cent higher than in October 1964. Seasonally adjusted October shipments at \$2,894 million, reflected a 2.5 per cent increase from September. Cumulative shipments for the ten month period were \$27,937 million compared with \$26,149 million in the same period last year.

A 1.2 per cent increase in durables shipments to \$1,363 million from \$1,346 million was more than offset by the 1.7 per cent drop in non-durables shipments to \$1,594 million. Compared with October, 1964, durables shipments were 13.2 per cent higher and non-durables shipments 2.9 per cent up. Unadjusted data indicated that heavier than usual shipments in the motor vehicles industry and moderately higher shipments of paper and allied products, wood manufacturing, petroleum and coal products were offset by decreases in the other major manufacturing industry groups.

Manufacturers' inventories owned at the end of October rose 0.5 per cent to \$5,529 million from September. At this level they were 9.0 per cent higher than in October, 1964. Total inventories held rose 0.7 per cent to \$5,837 million in October from \$5,795 million in the preceding month. After seasonal adjustment to \$5,893 million, they were 1.1 per cent higher than in September. Increases in manufacturers' inventories at the end of October were again largely concentrated in goods in process and only slightly shown in raw materials and finished products. The ratios of inventories owned to shipments at 1.87 and of finished products inventories to shipments at 0.66 were fractionally higher than the revised ratios of 1.85 and 0.65 respectively in September.

As in the previous two months, the accumulation of inventories at the end of October was larger in durable goods manufacturing than in non-durables. Nearly two-thirds of the gain in inventories owned came from a 4.0 per cent increase in the transportation equipment industries. Other substantial increases in inventories owned were reported in primary metal, paper and allied products and foods and beverages industries, while inventories were markedly down in September in petroleum and coal products, wood manufacturing and electrical products industries. All major groups except petroleum and coal products, reported higher inventories in October than in the same month last year.

New orders received in manufacturing in October were estimated at \$2,954 million. The seasonally adjusted estimate of \$2,932 million was 1.2 per cent higher than the \$2,897 million value in September.

Unadjusted unfilled orders at the end of October of \$3,074 million were little changed from the revised September level of \$3,076 million but 19.5 per cent higher than in October, 1964. Seasonally adjusted unfilled October orders were 1.2 per cent above the September mark. The 0.4 per cent increase in unfilled orders in durable goods industries in October was more than offset by the 2.5 per cent decrease reported by non-durables producers. Compared with corresponding levels in 1964 unfilled orders of durables and non-durables manufacturers at the end of October were 20.6 per cent and 13.9 per cent higher respectively.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

The preliminary estimate of the total value of manufacturers' shipments in November was \$3,039 million, 1.8 per cent higher than the revised total of \$2,985 million for October. New orders received during November were valued at \$3,062 million, a shade higher than October's revised figure of \$3,027 million; unfilled orders at the end of November were 0.7 per cent higher at \$3,141 million than a month earlier. The level of inventories owned at \$5,570 million on November 30 was up 0.6 per cent from October 31 and the ratios of manufacturers' inventories owned to shipments at 1.83 and of finished goods to shipments at 0.64 reached the second lowest points of 1965, well below the ratios for November, 1964 of 1.89 and 0.68 respectively.

Seasonally adjusted, the preliminary estimates for November indicated the following movements: manufacturers' shipments edged up 0.3 per cent over the revised October value to set a new high of \$2,930 million for Canada; values of new orders were 1.7 per cent below those for October in total; slight declines in inventories of finished products and raw materials offset the 0.9 per cent increase in the value of goods in process to cause a slight drop in total of manufacturers' inventories.

Shipments for the first eleven months of 1965 totalled \$31,004 million, 7.4 per cent higher than the comparable value of \$28,870 million in 1964. The increase in shipments during this period was much greater in the durable goods industries than in the non-durable goods industries. Durable goods shipments rose by \$1,604 million or 12.3 per cent while non-durable goods shipments rose by \$530 million or 1.4 per cent. November shipments in durable goods industries continued the rise that started in September by increasing another 4.1 per cent to a new high value of \$1,588 million, 25 per cent above the level in the corresponding month in 1964. The non-durable goods industries continued to decline in November where shipments at \$1,481 million were off again from September and 0.5 per cent lower than October. It should be observed, however, that there is a marked seasonal pattern in the food industries which accounts for about a third of the non-durable industries. Seasonally the peak in food manufactures is reached in September and October and declines from this until February or March.

The gain in November shipments in the durable goods category reflects the more than seasonal increase in the transportation equipment industries, particularly the marked increase in shipments in the motor vehicle industry. Other substantial increases in November shipments were reported by the primary metal industries which rose 5.4 per cent. Shipments increased by 19.0 per cent in the tobacco and tobacco products industry which normally show a marked seasonal increase in both November and December each year. Relatively large decreases were recorded in the clothing industries where, however, the declines from September appear to be less than usual, and in the wood and non-metallic mineral products industry groups where there is gain a normal seasonal decline in the fourth quarter of the year.

The build-up in manufacturers' inventories owned at the end of November was largely concentrated in the non-durable goods industries which rose 0.9 per cent

from the revised \$2,816 million in October to \$2,842 million and was reflected mostly in the raw materials and goods in process inventories. End of November inventories owned by durable goods producers were only slightly higher than at the end of the previous month while total inventories held declined fractionally. Among the major industry groups, somewhat larger increases in inventories owned at the end of November were reported by the foods and beverages industries, the tobacco industries, the machinery industries, the non-metallic mineral products industries and the chemical products industries. In comparison with the levels in November 1964, relatively high increases in November inventories owned were shown by the machinery industries and the metal fabricating industries which were up 25.3 per cent and 22.4 per cent respectively.

New orders received by durable goods manufacturers during November reached \$1,582 million, up 3.1 per cent from the month before, while new orders in the non-durable goods industries declined by 0.9 per cent to \$1,480 million. The level of manufacturers' unfilled orders at \$3,141 million at the end of November was 20.6 per cent over the value of \$2,605 million in November 1964. The increase in unfilled orders from October to November was reflected entirely in the durable goods industries' total of \$3,635 million, which was 0.9 per cent higher than in the previous month and 20.7 per cent above that of November 1964.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Value of manufacturers' shipments and new orders in December were 1.0 per cent and 1.5 per cent off respectively from November according to the preliminary estimate. These decreases in December, however, were much less than the usual seasonal drops as the seasonally adjusted estimates for December shipments and new orders were 4.0 per cent and 4.4 per cent higher respectively, rising from the revised figures of \$2,973 million and \$3,014 million in November to \$3,093 million and \$3,146 million. The backlog of unfilled orders at the end of December valued at \$3,177 million was 0.7 per cent above the November level, while manufacturers' inventories owned expanded 1.8 per cent in December from \$5,599 million to \$5,702 million.

At the preliminary estimate of \$3,052 million, December shipments were 13.5 per cent higher than the total for the corresponding month of last year, and brought the total value of shipments for 1965 to \$34,101 million, 8.1 per cent above the value of \$31,560 million in 1964. Shipments of non-durable goods producers dropped 3.9 per cent in December, largely the result of seasonal factors, to \$1,544 million from the revised \$1,607 million in November. The largest seasonal decline in shipments occurred in the clothing industries where shipments were 26.3 per cent lower than in the previous month. The foods and beverages industries which account for about one-third of the value of shipments in the non-durable goods industries also showed a seasonal decrease in December, but of less than three per cent. Shipments in the tobacco industries, on the other hand, rose very strongly, again reflecting mainly seasonal factors. Durable goods manufacturers' shipments in December amounted to \$1,508 million, up 2.1 per cent from November, with higher absolute value increases shown by the electrical products industries and the transportation equipment industries, and with a substantial seasonal decrease recorded in the wood industries.

Total value of inventories held in the manufacturing industries at the end of December rose 1.9 per cent to the value of \$5,992 million, or 1.2 per cent to a seasonally adjusted estimate of \$5,982 million. Following the trend of the previous year, the change in stocks in December was largely centered in raw materials and goods in process. Seasonally adjusted inventories owned at the end of December also increased by 1.1 per cent to \$5,682 million, a level 10.5 per cent above the comparable figure of a year ago. The ratio of inventories owned to shipments in December was up to 1.87 from 1.82 in November, while the ratio of finished products inventories to shipments at 0.64, scarcely changed from last month.

About two-thirds of the manufacturers' gain in inventories at the end of December came from the 2.4 per cent increase in the durable goods industries whose month-end inventories owned in 1965 averaged 12.5 per cent higher than the level a year earlier. The 1.3 per cent increase of non-durable goods producers' end-of-December inventories owned was reflected entirely in raw materials. Relatively marked build-ups in inventories owned were recorded in the rubber industries, the machinery industries, the leather industries, the chemical and chemical products industries and the transportation equipment industries.

The decrease in new orders received by manufacturers during December was largely concentrated in the non-durable goods industries which was down by 2.7 per cent. As shipments dropped by more than this amount, outstanding orders at the end of the month increased by 2.7 per cent from last month. The backlog of unfilled orders reported by the durable goods industries showed only a small increase of 0.3 per cent from November to December. The average level of manufacturers' month end unfilled orders throughout 1965 was estimated at 18.4 per cent higher than the comparable level of 1964.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

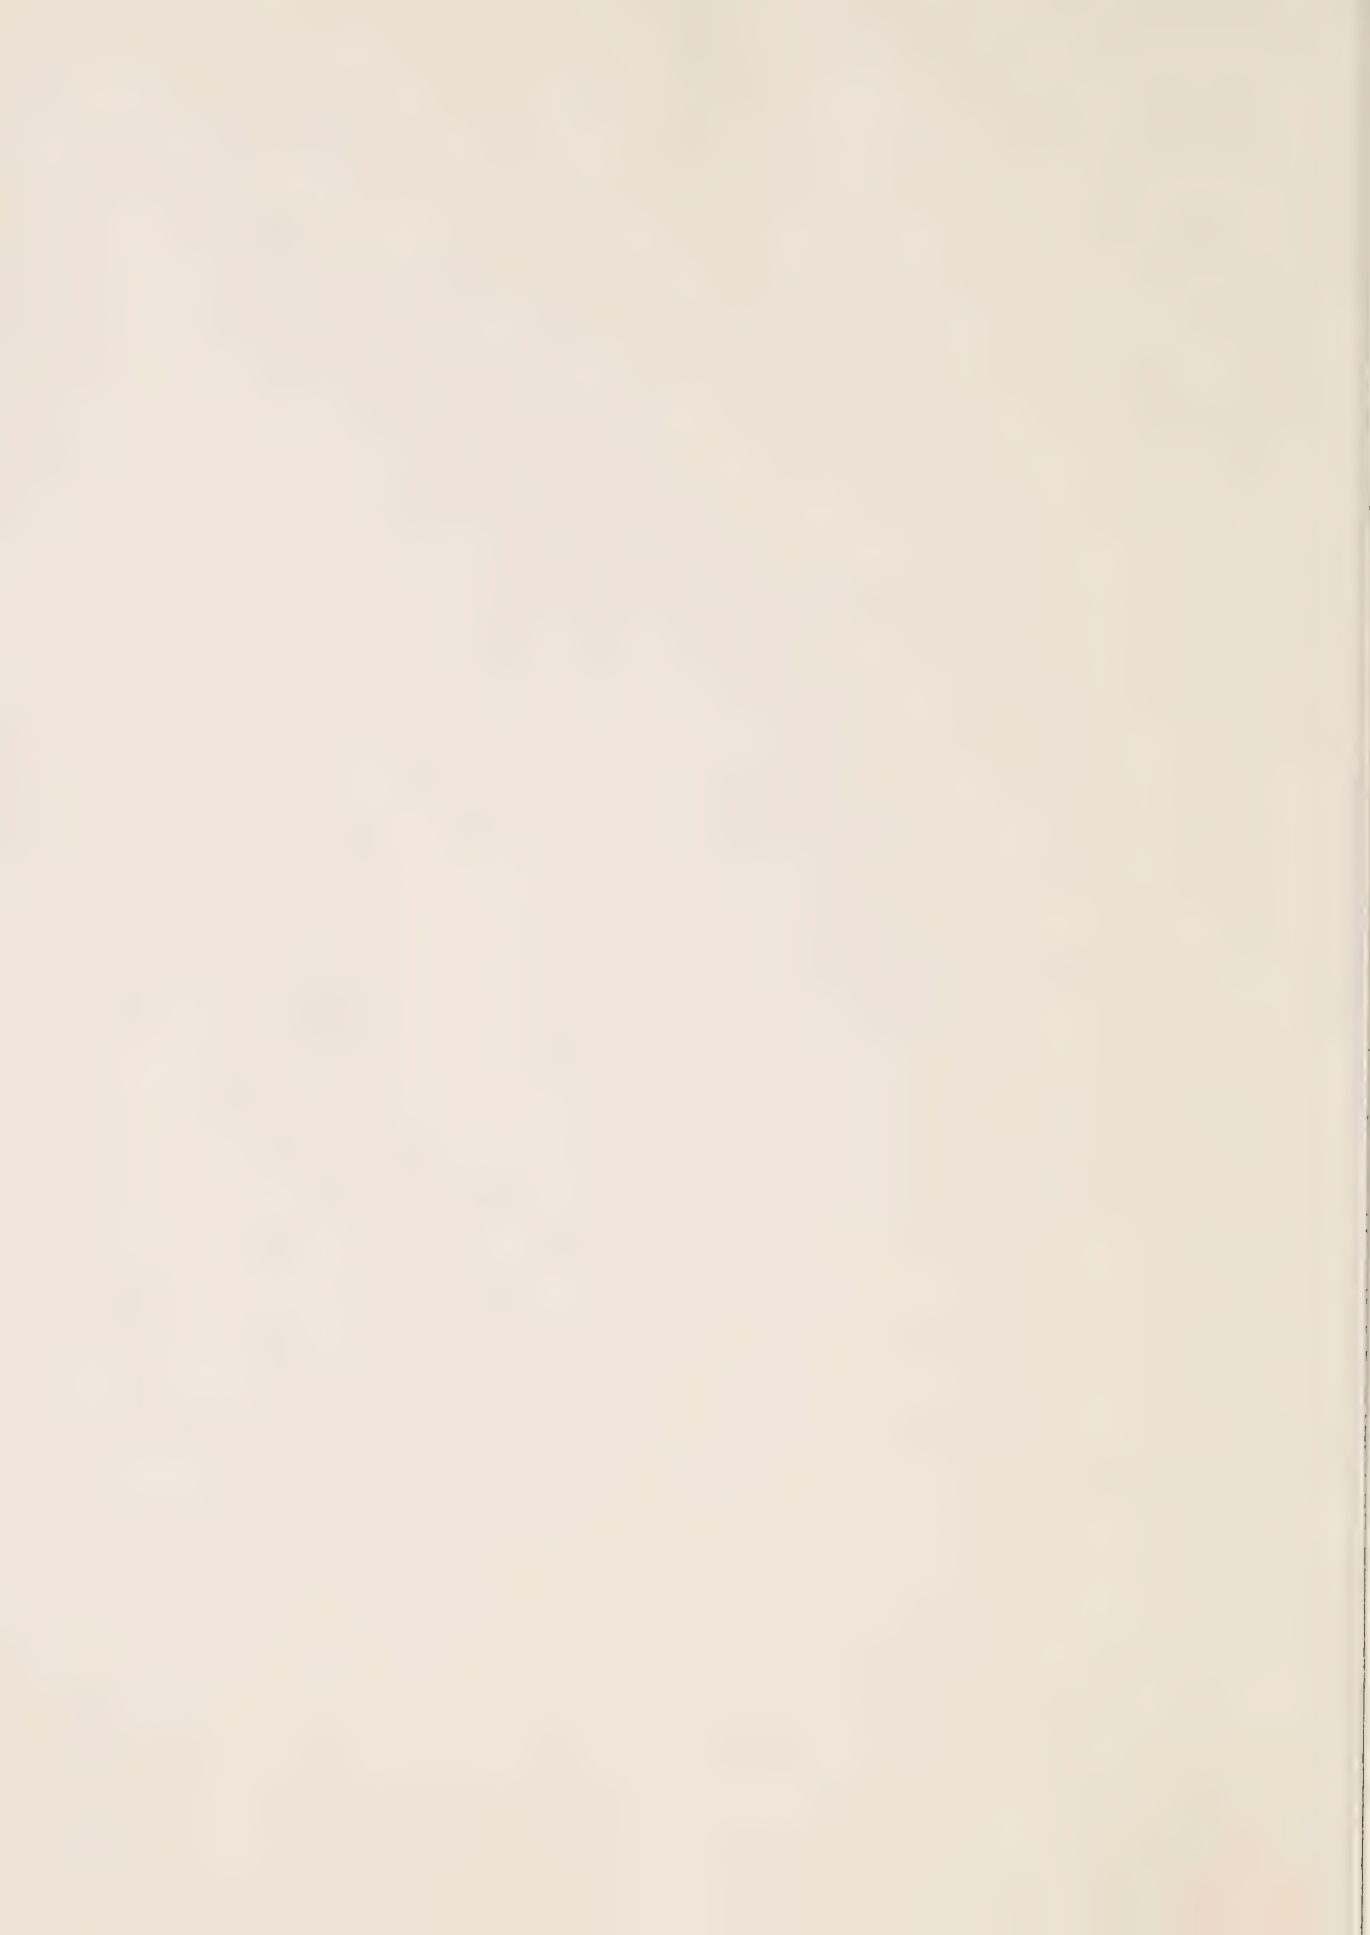

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.
